

Simon Jakobsson

ANDROID & EMBEDDED SOFTWARE ENGINEER

Kryssdäcket 1, Göteborg

☎ (+46) 760-171013 | ✉ simme.jakobsson@gmail.com | 🏠 znarvl.github.io/portfolio | 📱 Znarvl | 🌐 simon-jak

Profile

Simon is a hard-working developer with experience in systems engineering, primarily focused on integrating complex systems in automotive and construction platforms. His background gives him strong analytical skills and broad technical expertise in both high- and low-level languages, testing and DevOps, enabling him to see the bigger picture of large-scale software engineering.

Simon enjoys learning about new technologies and software strategies, applying them in his work, and sharing his knowledge with colleagues. With a strong sense of responsibility and willingness to help, he takes action to enable fellow team members and move projects forward.

Skills

Programming languages	Kotlin, Java, C++, Typescript, Javascript, Python, C#, SQL
Frameworks & Techniques	React, Vue, Node.js, REST, Django, Flask, MongoDB, .NET, Tailwind, Bootstrap, CI/CD, CMake, GTest, Agile, Functional Programming, DevOps, Pair programming, AUTOSAR, Gradle
Tools & Environments	Git, Gerrit, Docker, PostgreSQL, NoSQL, GitHub Actions, Gitlab CI/CD, TCP/IP, UDP/IP
Languages	English, Swedish

Experience

CPAC Systems | Android Developer, Site Operations

Göteborg

Kotlin, Java, TypeScript, SQL, Jenkins, Gerrit, Gradle, GraphQL, gRPC, XML, Jetpack Compose, Room, Azure DevOps, JUnit/Truth, MockK

Feb. 2025 - Present

- Built Android functionality for Volvo Site Operations, integrating Dig Assist, Load Assist and Haul Assist with machine and operator workflows.
- Expanded Volvo cloud integration, connecting more data and workflows to backend systems.
- Introduced Jetpack Compose and maintained a shared UI library to improve consistency and reuse across multiple apps.
- Served as architect for multiple projects, leading implementation direction and guiding the team to practical, successful solutions.
- Modernized architecture and engineering practices across the app suite to improve maintainability.
- Frequently acted as the engineering point of contact with PMs and customers, answering questions and finding solutions.
- Analyzed development workflows to identify recurring process bottlenecks and quality risks, driving improvements in review, testing, and engineering practices.

Vector Informatik | Embedded Software Engineer

Göteborg

C++, MISRA, Python, Java, DevOps, Docker, AUTOSAR, DoIP, TCP/TLS, UDP, IP

Mar. 2024 - Feb. 2025

- Implemented Adaptive AUTOSAR DoIP functionality in C++, writing code for the protocol and ensuring it integrated reliably with the in-vehicle network.
- Worked as part of a team responsible for 3–4 components across ASIL B to ASIL D, balancing safety, robustness and customer integration needs.
- Led a small improvement project to reduce heap allocation and speed startup for customers, and shared the resulting toolkit and best practices with the team.
- Co-owned one AUTOSAR component and joined customer discussions to ensure new features and bug fixes met expectations.

Knowit | DevOps Master's thesis

Linköping

DevOps, GitHub Actions, Gitlab CI/CD, Jenkins, Azure, Docker

Aug. 2023 - Dec. 2023

- Implemented a standardized DevOps workflow to address knowledge loss in project-based environments with high developer turnover
- Applied testing standards, coding standards, and containerization to enhance knowledge retention
- Automated workflows and integrated tools within a CI/CD pipeline for continuous delivery and process improvement
- Used CMMI (Capability Maturity Model Integration) to assess and define the organization's DevOps maturity levels before and after

Maxar Technologies | Full stack Developer

Linköping

TypeScript, Python, React, Django, PostgreSQL, CesiumJS, GIS, Agile

Jun. 2023 - Aug. 2023

- Built a web application from scratch to visualize data on an interactive globe.
- Handled the full development process as the sole developer, from gathering requirements based on team needs to implementing the solution.
- Worked using agile methods, delivering continuous updates and improvements on a weekly basis.

Education

Linköping University

Linköping

M.Sc. in Computer Science and Software Engineering (Swedish: Civilingenjör i mjukvaruteknik)

- Specialization - Large-scale software development
- Bachelor thesis - Technical drawings and logistics in the construction industry (VueJS, Typescript)

Lund University

Lund

Introduction to Information Systems (Swedish: Systemvetenskap)

- Completed one semester of coursework in Information Systems (Java, UML)

Extracurricular Activity

Datateknologsektionen | Welcoming committee

Linköping

Appearance and Music Coordinator

- Responsible for managing Datateknologsektionen reception at Linköping University
- Oversaw the team's presentation, including costume design, and managed all musical performances

Datateknologsektionen | Board Member

Linköping

Board member at large

- Collaborated with fellow board members to implement strategic initiatives, growth and development of the organization
- Helped organize events and create a supportive environment for students during the pandemic

Datateknologsektionen | D-band

Linköping

Band master

- Led rehearsal coordination and worked closely with the band to ensure alignment toward shared objectives
- Worked closely with event organizers to ensure good communication and collaboration for a successful performance
